---

Colin –

Thank you for submitting information regarding the removal of transformers and electrical switching equipment from the Warehouse E portion of the Centennial Mills complex. We are comfortable with the manner in which removal of electrical equipment was completed, sampling was performed, etc. As indicated in our attached approval letter, we believe data generated from the action support DEQ's 2013 determination that the transformers are not a significant source control concern.

Please let me know if you have questions or comments.
